Pollution Watch

Could you be a Pollution Spotter for Bradford's rivers?

Why does it matter?

Our becks, rivers and seas are a haven for wildlife and give pleasure to us all. Yet, Bradford's Becks are frequently polluted by sewage and industry.

The Friends of Bradford's Becks are determined to find out where this pollution is coming from, but we need the help of willing volunteers.

Together we can make a real difference to bring more wildlife to our becks and help in making them a better place for all to enjoy.

What does it involve?

- ✿ *Visiting the same spot on the beck at least 3 times a week.*
- ✿ *Taking a photograph and recording what you see on our smartphone app.*
- ✿ *Or you can upload your pictures and notes via our website. You only need to visit when it is not raining heavily. Different days and times are fine - and are a good idea.*

What we offer our Spotters

We'll provide training sessions, both indoors and field visits including a Health & Safety briefing for your chosen site. Each quarter, a get together with the other Pollution Spotters and a briefing on results so far.

Yorkshire Water have promised to investigate all sources that we report. We will be liaising regularly with the Environment Agency and Bradford Council over our findings.

Be part of the team making a difference that benefits the city and its people.

Become a Pollution Spotter!

Our project will run April to December 2020

Please join us if you are interested in helping to improve Bradford's becks.
